What our customers say...

Filmmaking is such a collaborative effort... we have state-of-the-art camera technology and state of the art post-production software. We need the machines that can handle that reliably, and that's what Dell offers.
— A.J. Carter, Writer / Director

Dell workstations are well engineered and extremely reliable. Our artists use them full-on during the day and then they join our massive Dell render farm. Despite that constant use, not one of them 200 we bought last year has failed.
— Head of Systems Support, Framstore
